GE Frame 5 McGuffey Pulse Clean Filter

Westinghouse 191 McGuffey Pulse Clean Filter

Pulse Cleaning Filters Reduce Maintenance and Increase Turbine Availability

Unit: 1 GE Frame 5 and 2 Westinghouse 191 gas turbines
Use: Natural Gas Pipeline Compression
Location: Pennsylvania
Requirements: Increase air filtration efficiency and decrease maintenance

In any conditions the efficiency of a pulse cleaning unit is hard to beat. While reducing the maintenance and cost of filter replacement, they also run more efficiently in the winter by clearing themselves of the frost build-up brought on by moisture in the air. McGuffey Energy Services built and installed three of the self cleaning units for a pipeline in Pennsylvania. These units can be sized to fit any type of turbine or reciprocating engine in harsh or dirty conditions.

PROVIDING SERVICES TO:
-Pipeline -Power Generation
-Production -Petrochemical
