

MFT - 40 FILTER HOUSING

MFT-40 Filter housing is a type of Air inlet filter house that is used to supply clean air to the compressors.

The picture that you see is the actual filter house unit that is supported on a beam structure, the total height of the housing including the support structure is about 276 inches.

The filter house has a total of 40 filters (20 on each side) that will supply clean air to the Compressor; the inlet of the Compressor unit is connected to the top of the filter house. The project started in the month of April, 2008 and it took about 7 months to finish Engineering, design and fabrication
